**Functions**

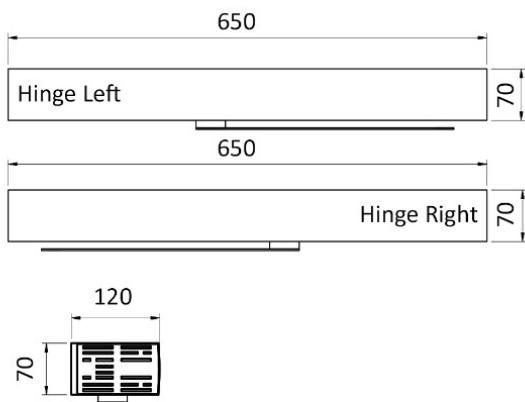

- Site selectable programming options via the optional Display Programming Switch (DPS) include:
  - Automatic mode: The doors will automatically power open on entry or egress via the activation devices, and automatically close after a preset time
  - Servo function: Manual door opening is supported by the drive and ensures that even heavy doors can be opened more easily
  - Push & go function: Can be activated on request, i.e. the door is only slightly opened by hand and the automatic activation opens the door completely
  - Low-energy function: Allows the drive to consume less energy, moving the door at a reduced speed
  - Interlocking door system function: Where two doors work together so that one door will open, when the other is closed. This could be a security feature or could be to create a draught lobby to reduce heat loss
